**07/06/06      Lee County Detention Center      Antonio Martinez**

This 48 YO Hispanic male is doing his own therapy now, doing range of motion of his hand. He only hurts in his middle finger in the area of the proximal phalanx, MCPJ, and PIPJ. He says it doesn't hurt in the ring finger, 5<sup>th</sup> finger, or index finger.

**Physical Exam:** He can close his hand fairly well but not as well as the other side. Most of his problem is in his middle finger and not in his ring finger or 5<sup>th</sup> finger.

**Impression:** Healing fractures of the spinous continuouses.

**Plan:** Physical therapy exercises here. Dr. Hillyer gave him a prescription for Ultram to use prn. That will be available to him on a b.i.d. schedule. No other complaints at this time. Recheck as needed.
